Question 1

```
mtcars[mtcars$cyl < 6, ]</pre>
##
                  mpg cyl disp hp drat
                                             wt qsec vs am gear carb
## Datsun 710
                  22.8
                         4 108.0 93 3.85 2.320 18.61
                                 62 3.69 3.190 20.00
## Merc 240D
                  24.4
                         4 146.7
                                                                     2
## Merc 230
                  22.8
                         4 140.8
                                 95 3.92 3.150 22.90
## Fiat 128
                  32.4
                         4 78.7
                                  66 4.08 2.200 19.47
## Honda Civic
                  30.4
                         4
                           75.7
                                  52 4.93 1.615 18.52
                         4 71.1
## Toyota Corolla 33.9
                                  65 4.22 1.835 19.90
                                                                     1
                                                       1
## Toyota Corona
                  21.5
                         4 120.1
                                  97 3.70 2.465 20.01
## Fiat X1-9
                  27.3
                         4 79.0
                                  66 4.08 1.935 18.90
                                                                    1
## Porsche 914-2
                  26.0
                        4 120.3 91 4.43 2.140 16.70
                  30.4
                                                                    2
## Lotus Europa
                         4 95.1 113 3.77 1.513 16.90
                  21.4
                         4 121.0 109 4.11 2.780 18.60
## Volvo 142E

```

Question 2

The code generates five missing values, because x represents 5 different numbers (1, 2, 3, 4, 5). This means that when x is assigned NA, the output will be NA for (1, 2, 3, 4, 5) which results in 5 different missing values (NA, NA, NA, NA, NA).

Question 3

mtcars[1:15] returns an error because there is no comma then space after 15. There is a undefined columns being selected. You need to write the code as mtcars[1:15,] because you code the 1D index for each dimension and SEPERATE them by a comma. This identifies which columns are being selected.

Question 4

x[is.na(x)] = 0 codes for any value being listed /associated with NA to be 0. IN other words, when NA is written, 0 is the output. The nrom = 3 gives the output containing the number of rows that are present in the data frame. since NA=x, and the number of NA is 3, we should get an output of NA, Na, NA being 0, 0, 0. So this code would generate 3 rows for NA, NA, NA, and have them all equal to 0.

Question 5

```
mpg_2 <-
    ifelse(mtcars$mpg < 16, "Low",</pre>
           ifelse(mtcars$mpg < 21, "Low_Intermediate",</pre>
                   ifelse(mtcars$mpg < 26, "High_Intermediate", "High" )))</pre>
 mpg_2
    [1] "High_Intermediate" "High_Intermediate" "High_Intermediate"
    [4] "High_Intermediate" "Low_Intermediate"
                                                   "Low_Intermediate"
   [7] "Low"
                              "High_Intermediate"
                                                   "High_Intermediate"
## [10] "Low_Intermediate"
                             "Low_Intermediate"
                                                   "Low_Intermediate"
                             "Low"
                                                   "Low"
  [13] "Low_Intermediate"
